

C.W.P TECHNICAL SHEET

C. W. P is a two component cementitious waterproof.

- Powder made of cementitious, fillers and admixtures (2.25kg)
- Liquid based on resins and additives . (US gallon)

C.W.P is characterized with an excellent waterproofing.

C.W.P has many advantages among which high adhesion to all kinds of substrates as well as its high elasticity feature. It is an easy blending mixture with a simple application mode.

C.W.P is a non toxic product and can be applied on interior or exterior surfaces to prevent water infiltration.

Scope of use: Water tanks, swimming pools, terraces, balconies, roofs, walls....

Instructions for use:

The substrate must be clean and free from grease, oil, dust and friable matters. Any damage or concrete defect should be repaired in advance.

All holes should be filled with a non shrink mortar like C.R.M.

Mix the 2 components very well with a mechanical mixer without adding water or any other material

C.W.P must be coated with a painting brush.

Coverage for 1 set of C.W.P is around 3sqm(2 coats) depending on the substrate.

Safety precautions:

Avoid prolonged contact with skin. Wear protective gear for hands and eyes.
